## **AMENDMENTS TO THE CLAIMS**

The following listing of claims will replace all prior versions and listings of claims in the application.

## **LISTING OF CLAIMS**

- (Currently Amended) An engine control system in a vehicle comprising:
  a variable displacement internal combustion engine;
- a controller for controlling the displacement of said variable displacement internal combustion engine;

wherein said controller adaptively determines a torque threshold used to switch the variable displacement internal combustion engine between a partially displaced operating mode and a fully displaced operating mode <u>based on a time the variable</u> <u>displacement internal combustion engine operates in said partially displaced operating mode</u>.

- 2. (Original) The engine control system of Claim 1 wherein said variable displacement internal combustion engine is a gasoline engine.
- 3. (Original) The engine control system of Claim 1 wherein said variable displacement internal combustion engine includes at least six cylinders.
- 4. (Original) The engine control system of Claim 1 wherein said variable displacement internal combustion engine is an eight-cylinder engine.

- 5. (Original) The engine control system of Claim 1 further comprising a brake pedal sensor electronically coupled to said controller.
- 6. (Cancelled)
- 7. (Currently Amended) A method of controlling the displacement of a variable displacement internal combustion engine comprising the steps of:

measuring a variable indicative of torque for the variable displacement internal combustion engine;

determining a time the variable displacement engine operates in a partially displaced operating mode; and

adaptively modifying a torque threshold to vary the displacement of the variable displacement internal combustion engine <u>based on said time</u>.

8. (Cancelled)

9. (Currently Amended) A method of controlling the displacement of a variable displacement internal combustion engine comprising the steps of:

measuring a engine intake manifold vacuum for the variable displacement internal combustion engine; and

adaptively modifying a vacuum threshold to vary the displacement of the variable displacement internal combustion engine <u>based on a time the variable displacement</u> <u>engine operates in a partially displaced operating mode</u>.

10. (Cancelled)
